Techo Twist

instructions for use

Instructions for the TWIST office chair

These instructions include information on the design, care and maintenance of the Twist office swivel chair. All parts of the chair with which the user may come into contact have been designed so as to avoid injury or damage to property. The chair has been subjected to rigorous testing and it meets the demanding international standards ČSN EN 1335-1, 2 and 3. The fabric used on the seat and backrest are in the highest class for fire resistance, wear resistance and colour fastness according to international standards.

Description

The Twist office chair offers a high level of comfort when seated and supports correct body posture regardless of the height and weight of the user. The chair is characterised by the latest generation of mesh fabric used on the backrest, which combines increased support with a modern appearance. The chair is supplied as standard in black without a headrest or lumbar support. The swivel office chair has a high-quality synchronous mechanism, gas cylinder, aluminium five-arm base with chrome finish, universal castors, and armrests from aluminium and plastic. The chair is intended exclusively for office use.

Principles for use

- correct functioning of the office chair is conditional on the use of the product in a suitable environment, i.e. standard office environment, standard levels of humidity and dust, correct handling (rough handling may damage the product);
- upholstery should be protected from contact with the sharp edges of other furniture;
- when using seating check that the control levers are correctly tightened to avoid the potential for injury;
- the metal base and plastic parts can be cleaned with standard non-abrasive detergents (we recommend standard fabric detergents at a temperature of 30°C avoiding saturation of fabric, dilute with water as required),. Do not use any organic or inorganic solvents!
- polished and plastic parts can be treated with standard non-abrasive furniture polishes, waxes;
- spilt liquid should be wiped up and dried immediately;
- upholstery should be cleaned with a brush or vacuum cleaner;
- gas pistons fitted to seating should not on any account be dismantled or subject to excessive heat. The gas cylinder is under constant pressure and injury may occur if this guideline is not observed;
- misuse of the chair, such as standing on it or sitting on the armrests, may result in injury, or in damage to the chair.

Please not:

If the instructions contained in this user manual are not observed the manufacturer is not responsible for any resulting damage that arises.

Height adjustable armrests
The armrest, made of topgrade molded urethane, can be adjusted for height and distance to the seat front.

Backrest
The backrest design enables a revolutionary degree of freedom for movement, and combined with the synchronous mechanism it provides a high degree of comfort whilst ensuring a healthy seating posture. The backrest tension can be adjusted using the lever under the seat on the right. Pulling this lever out and turning it clockwise or anticlockwise sets the tension.

Seat height
As a contribution to healthy seating each user can adjust the seat height to suit them using the lever under the seat on the right. The seat has an ergonomically shaped front edge.

Locking the backrest
The backrest can easily be locked at the required angle using the lever under the seat on the left.
